SUMMARY

Full-stack .NET developer building REST APIs with ASP.NET Core, Angular, and SQL Server, focused on backend systems, clean architecture, and scalable web application.

EDUCATION

Bachelor of Engineering – Computer and Systems Engineering
Zagazig University | Graduated: 2026

TECHNICAL SKILLS

Backend: C#, ASP.NET Core Web API, Entity Framework Core, REST APIs, JWT Authentication, Role-Based Authorization, Middleware, Clean Architecture, DDD, CQRS, MediatR, FluentValidation, Background Services, Caching, Dependency Injection, Unit & Integration Testing.

Frontend: Angular, TypeScript, JavaScript, HTML, CSS, Bootstrap.

Database: SQL, T-SQL, Database Design, ADO.NET, Query Optimization.

Tools: Git, GitHub, Docker, Postman, Swagger, CI/CD basics.

Concepts: OOP, SOLID Principles, Design Patterns, Clean Code, Problem Solving, Agile.

SELECTED PROJECTS

MechanicShop – Backend REST API

[GitHub](#)

Backend system for managing mechanic shop operations including work orders, scheduling, customers, and invoicing.

Tech Stack: ASP.NET Core, EF Core, SQL Server, MediatR, FluentValidation, JWT, Docker.

Key Features:

- Work order lifecycle management with bay scheduling
- JWT authentication with refresh tokens and role-based access control
- Customer, vehicle, and repair task management
- Invoice generation with PDF export
- Background services for automated workflow processing
- Caching, rate limiting, and structured logging

Architecture:

- Clean Architecture with CQRS (MediatR)
- Domain-driven design principles
- Pipeline behaviors (validation, logging, caching, transactions)
- Domain events + Result pattern
- Dockerized deployment

Testing:

- Unit & integration testing (xUnit)
- Testcontainers with SQL Server

DVLD – Driver & Vehicle License System[GitHub](#)

Desktop system for managing driving licenses, vehicles, and administrative workflows.

Tech Stack: C#, .NET Framework, WinForms, ADO.NET, SQL Server, 3-Tier Architecture

Key Features:

- Role-based authentication system
- Driver, user, and vehicle management
- License issuance, renewal, replacement, and international licenses
- License detention and release workflows
- Application status tracking system
- Driving test scheduling (theory & practical)
- Exam question bank system

Architecture:

- 3-tier architecture (Presentation / Business / Data Access)
- Separation of business logic from UI and data access
- Stored procedures with optimized SQL design
- Modular and maintainable structure

Volunteer & Activities

Student Volunteer – Academic Support (ZIGZAG Club, 2021–2023).

Supported students and faculty with academic materials and lecture notes, and coordinated academic activities and assisted in organizing exams and lecture sessions.
